Lab 1: Servlet Programming

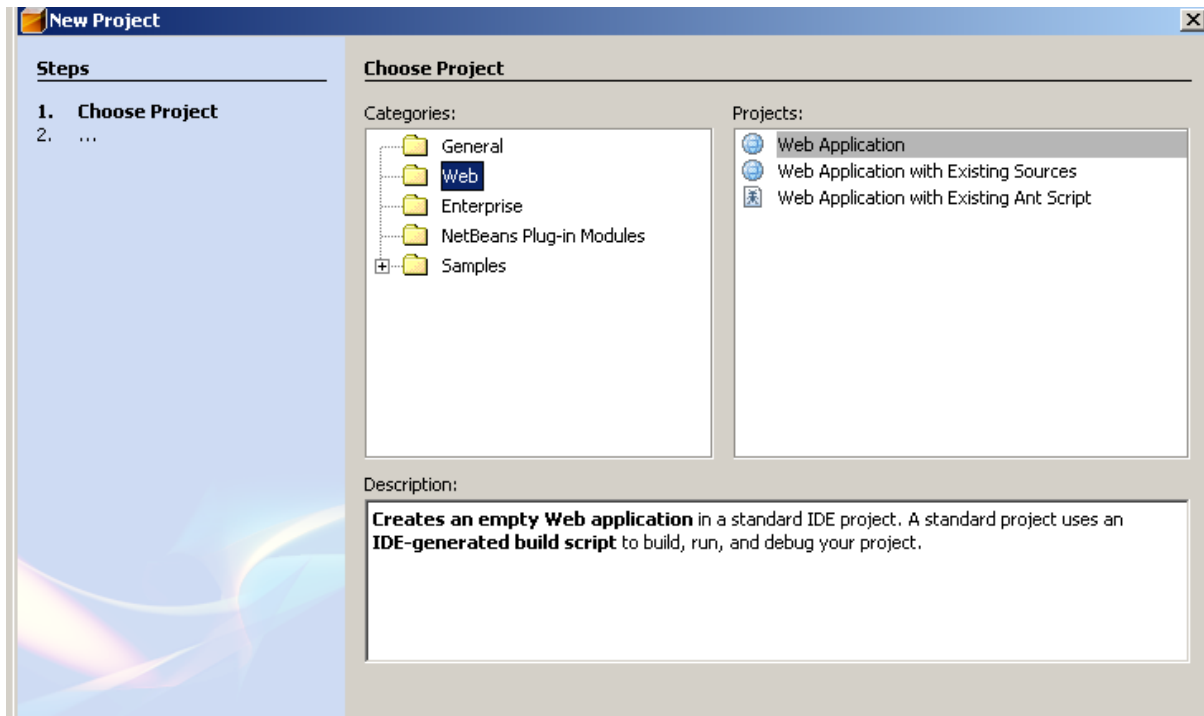

Program Code	Chuyên đề cơ sở 2 (Java nâng cao)
Issue/Revision	8/2018
Effective date	3/2011

Contents

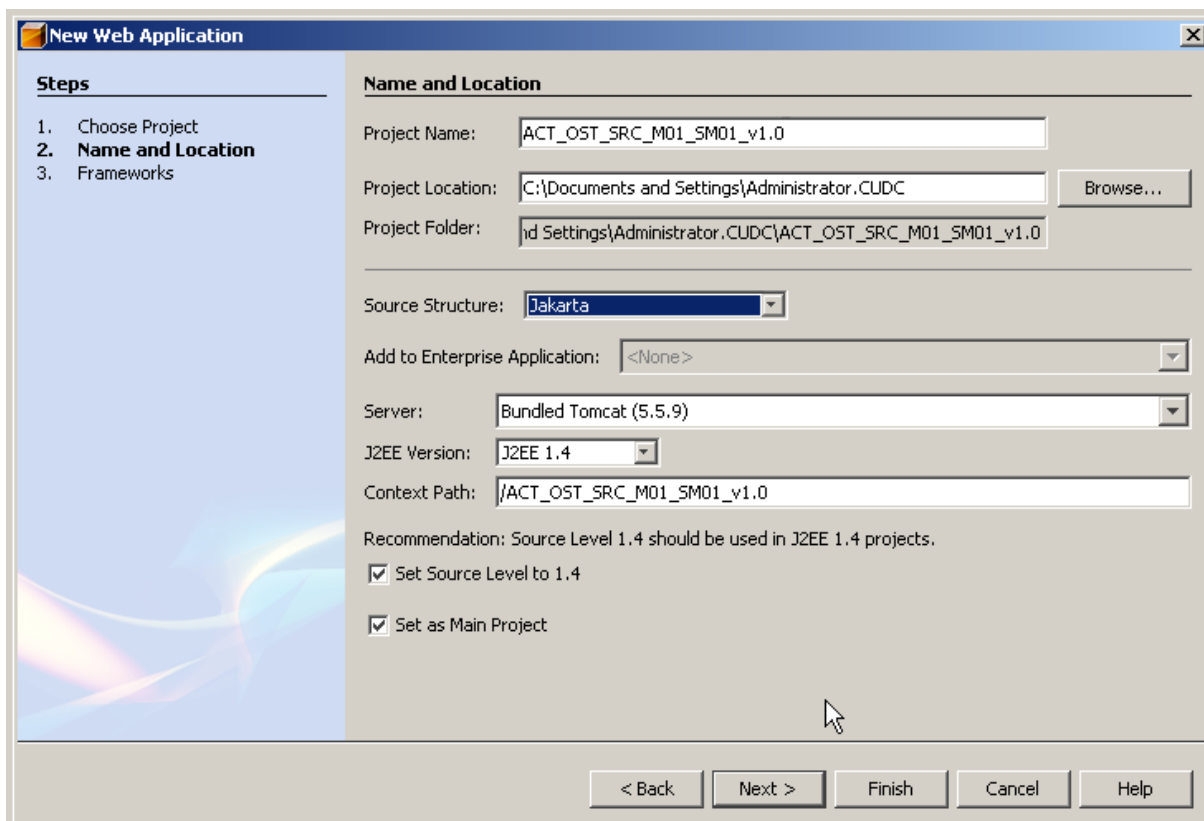

Lab Guide 1: Create Hello Servlet project.....	3
Lab Guide 2: Using doPost() methods	7
Lab Guide 3: Dummy Counter	9
Lab Guide 4: Servlet Context.....	10
Lab Guide 5: session tracker	13

Lab Guide 1: Create Hello Servlet project

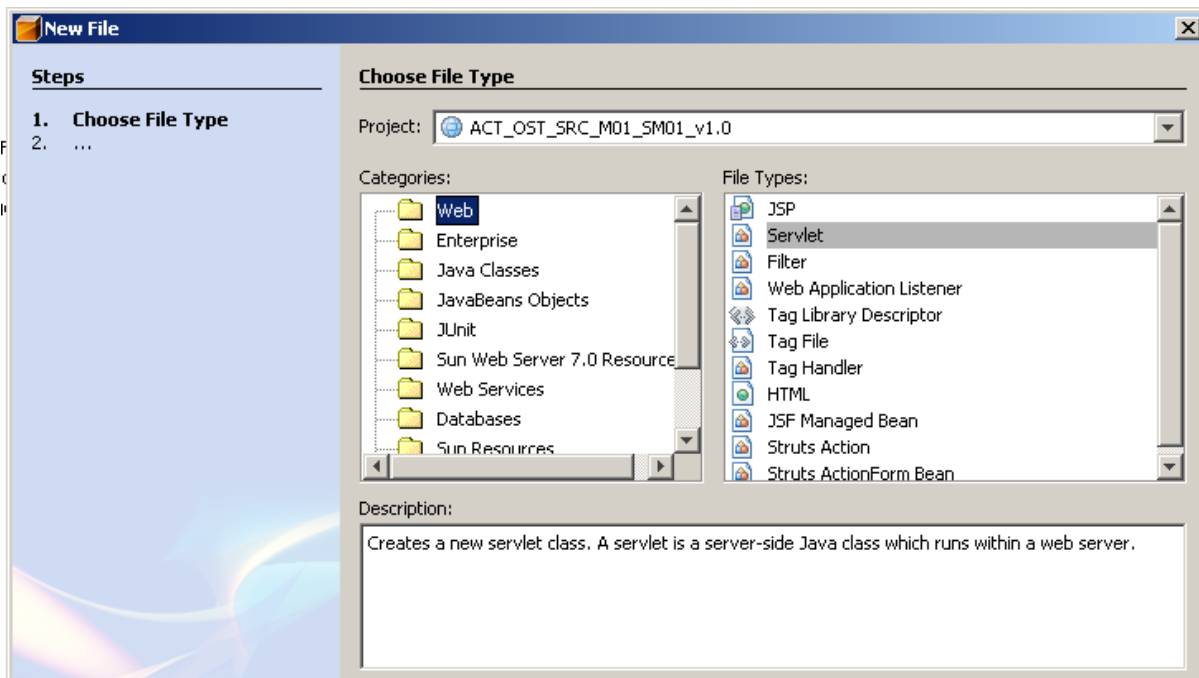

- Create new web project

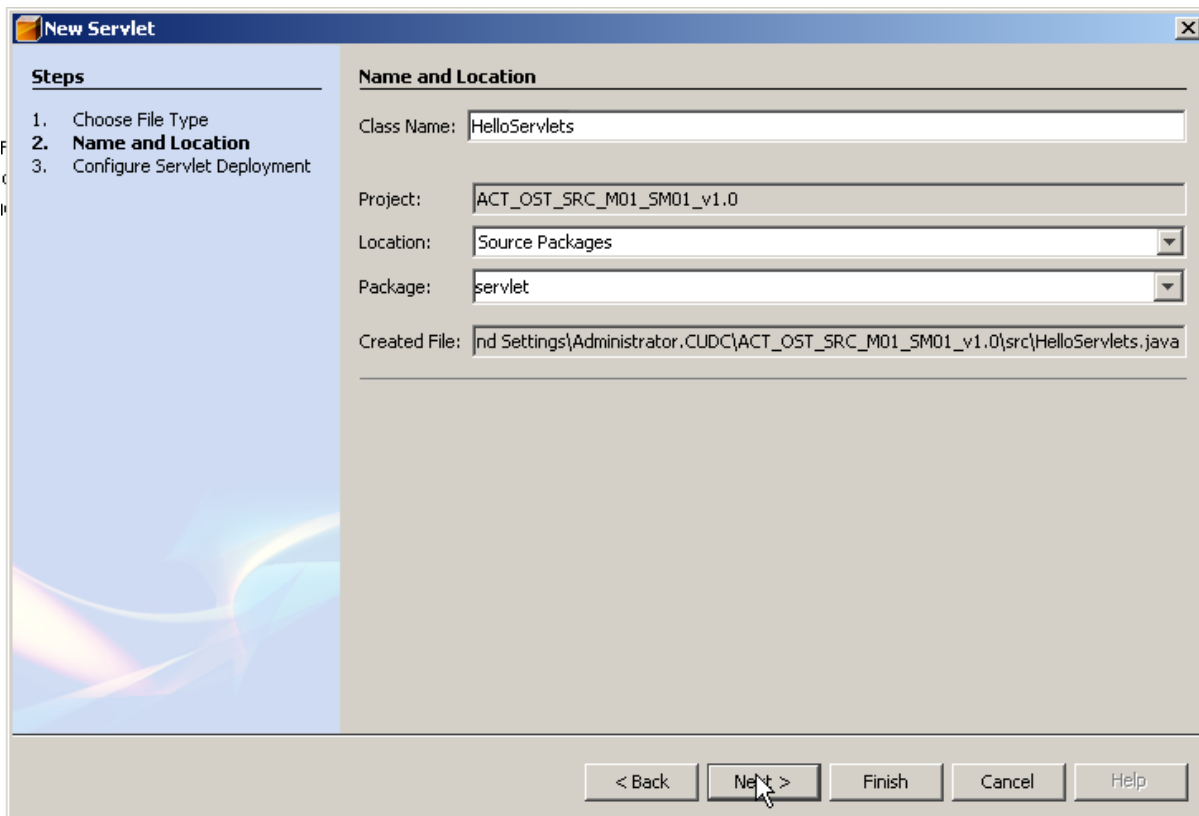

- Select Source Structure and Web container

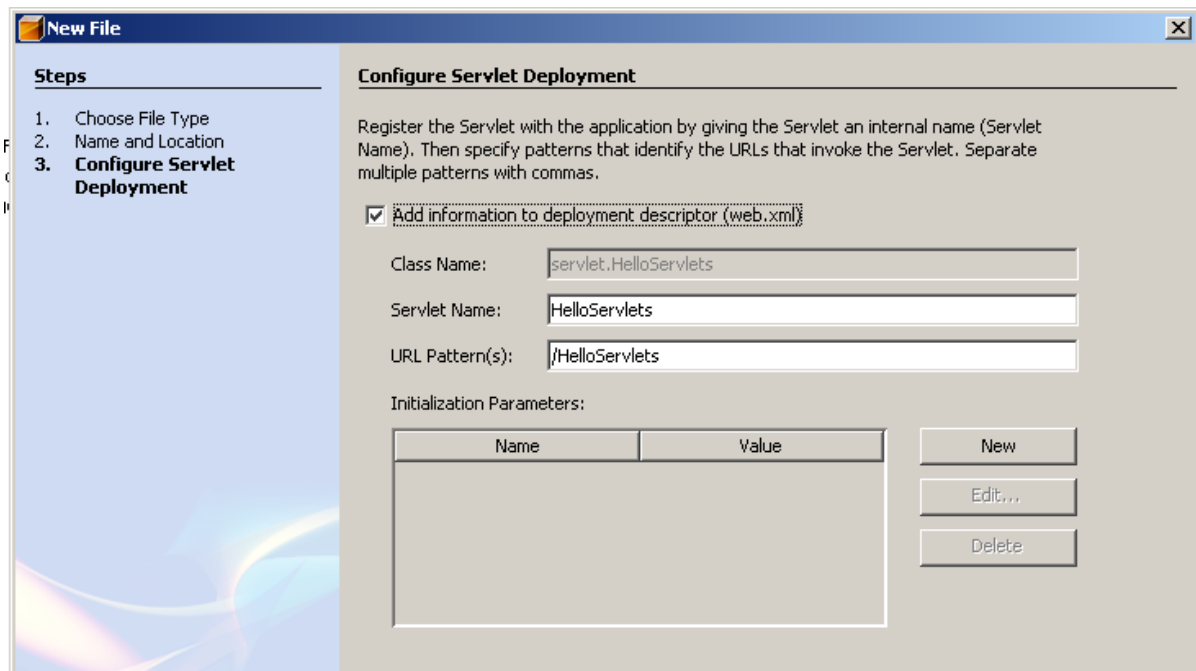

- Create a servlet

- Name the servlet

- Add servlet info to the web.xml

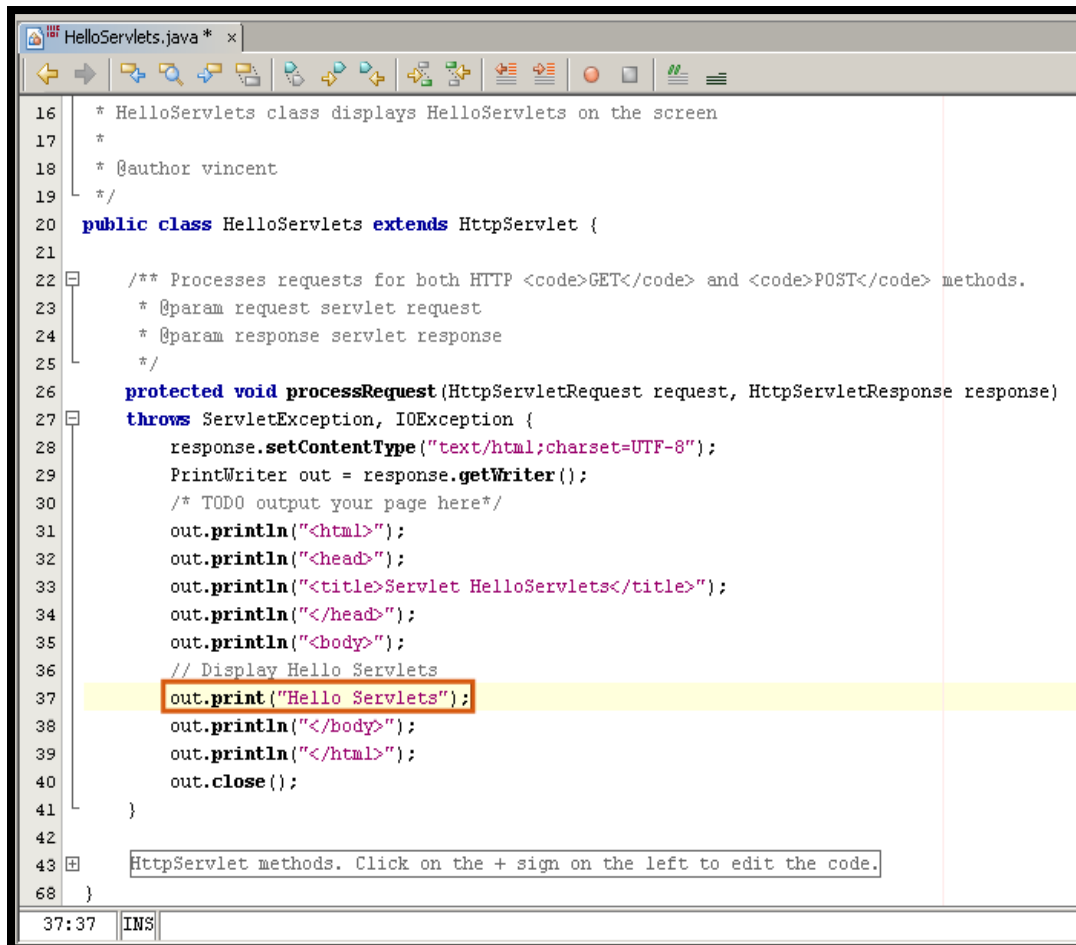

- Create HelloServlets source code

```
public class HelloServlets extends HttpServlet {

    /** Processes requests for both HTTP GET and POST methods.
     * @param request servlet request
     * @param response servlet response
     */
    protected void processRequest(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html;charset=UTF-8");
        PrintWriter out = response.getWriter();
        /* TODO output your page here
        out.println("<html>");
        out.println("<head>");
        out.println("<title>Servlet HelloServlets</title>");
        out.println("</head>");
        out.println("<body>");
        out.println("<h1>Servlet NewServlet1 at " + request.getContextPath () + "</h1>");
        out.println("</body>");
        out.println("</html>");
        */
        out.close();
    }

    HttpServlet methods. Click on the + sign on the left to edit the code.
}
```

```
16  * HelloServlets class displays HelloServlets on the screen
17  *
18  * @author vincent
19  */
20  public class HelloServlets extends HttpServlet {
21
22      /** Processes requests for both HTTP <code>GET</code> and <code>POST</code> methods.
23       * @param request servlet request
24       * @param response servlet response
25       */
26      protected void processRequest(HttpServletRequest request, HttpServletResponse response)
27          throws ServletException, IOException {
28          response.setContentType("text/html;charset=UTF-8");
29          PrintWriter out = response.getWriter();
30          /* TODO output your page here */
31          out.println("<html>");
32          out.println("<head>");
33          out.println("<title>Servlet HelloServlets</title>");
34          out.println("</head>");
35          out.println("<body>");
36          // Display Hello Servlets
37          out.print("Hello Servlets");
38          out.println("</body>");
39          out.println("</html>");
40          out.close();
41      }
42
43      HttpServlet methods. Click on the + sign on the left to edit the code.
44  }
```

Out-put

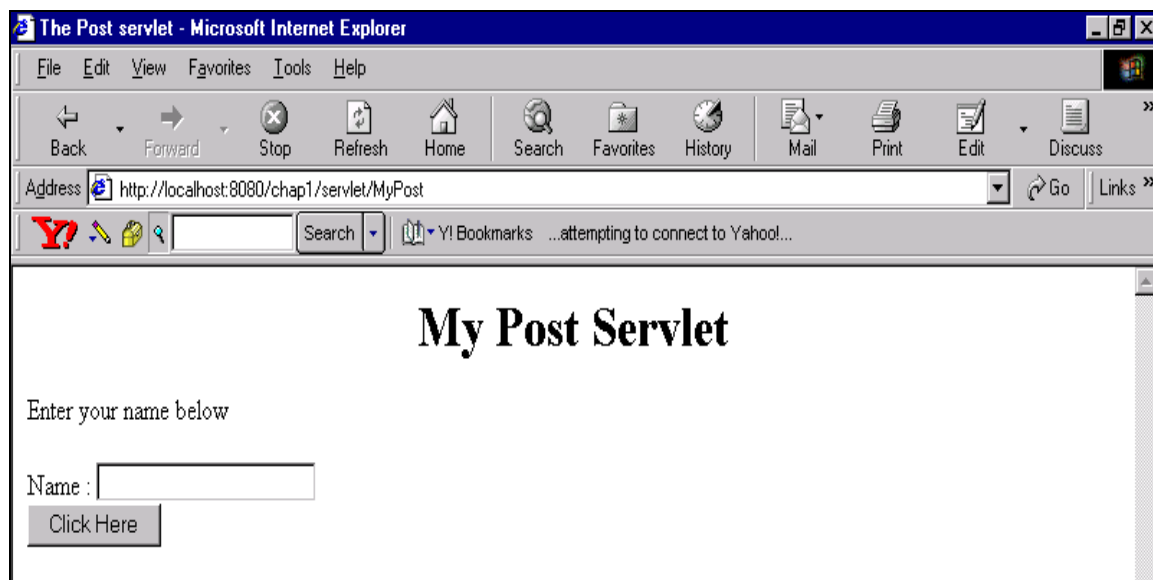

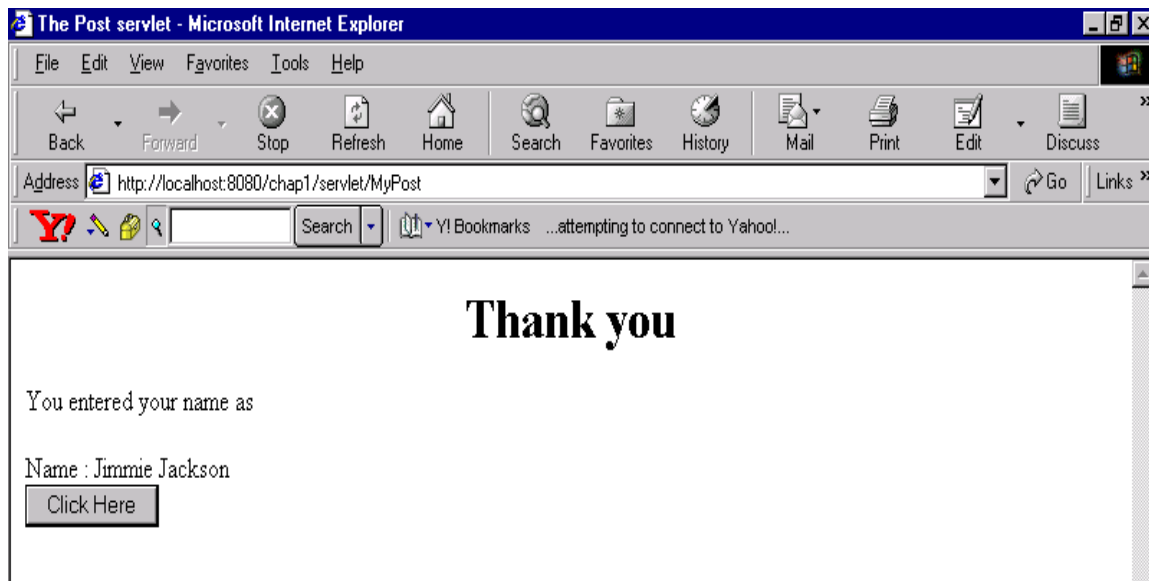

Lab Guide 2: Using doPost() methods

```
public class MyPost extends HttpServlet {
    public void doGet(HttpServletRequest req, HttpServletResponse res) throws ServletException,
        IOException {
        PrintWriter out = res.getWriter(); // opening an output
        ..... //Writing to an output stream
        out.println("<HTML>");
        .....
        out.println("<P>Enter your name below</P>");
        out.println("<FORM METHOD = \"POST\" ACTION = \" +
        \"http://localhost:8080/servlet/MyPost\"> ");
        out.println("<P>Name : <INPUT TYPE= \"TEXT\" NAME= \"fname\" \" + \"size= \"20\"><br>");
        out.println("<INPUT TYPE= \"Submit\" NAME= \"btn_submit\" VALUE= \"Click Here\">");
        out.println("</FORM></BODY></HTML>");
        out.close(); // Always close the output stream
    }
}
```

```
public void doPost(HttpServletRequest req, HttpServletResponse res) throws
    ServletException, IOException {
    PrintWriter out = res.getWriter(); // opening an output
    ..... //get data (parameter value ) from the request object
    String name=req.getParameter("fname"); //Writing to an output stream
    out.println("<HTML>");
    out.println("<HEAD>");
    out.println("<TITLE>The Post servlet </TITLE>");
    .....
    out.println("<P>You entered your name as </P>");
    out.println("<P>Name : " + name + "<BR>");
    out.println("<INPUT TYPE= \"Submit\" NAME= \"btn_submit\" "
    VALUE= \"Click Here\">");
    .....
    out.close();    } }
```

Output:

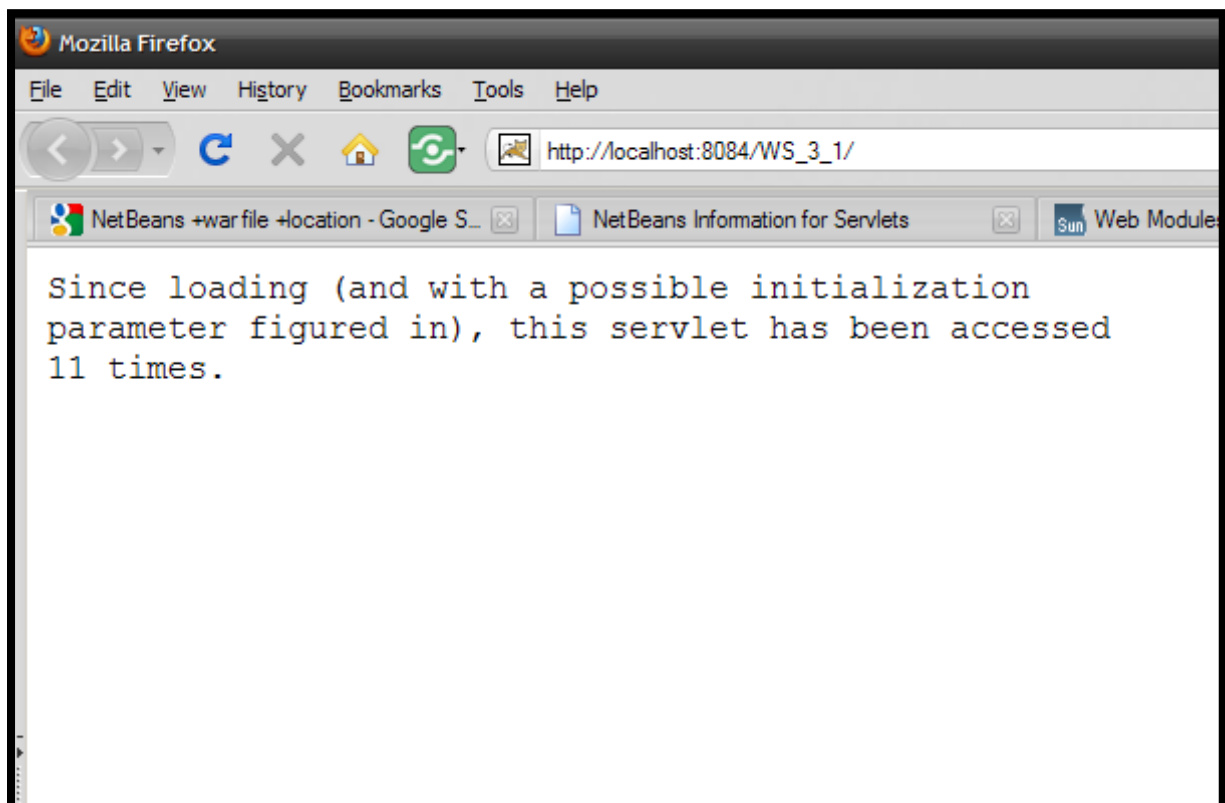

Lab Guide 3: Dummy Counter

Code

```
int count;  
  
public void init(ServletConfig config) throws ServletException {  
  
    String initial = config.getInitParameter("initial");  
  
    count = Integer.parseInt(initial);  
  
    public void doGet(HttpServletRequest req, HttpServletResponse res) throws  
ServletException, IOException {  
        res.setContentType("text/plain");  
        PrintWriter out = res.getWriter();  
        count++;  
        out.println("Since loading (and with a possible initialization");  
        out.println("parameter figured in), this servlet has been accessed");  
        out.println(count + " times.");  
    }  
}
```

Output

Lab Guide 4: Servlet Context

Code

```
public void init(ServletConfig config) throws ServletException {
    super.init(config); //To change body of generated methods, choose Tools

    ServletContext context = config.getServletContext();
    dbDriver = context.getInitParameter("DB_Driver");
    dbURL = context.getInitParameter("DB_URL");
    dbUser = context.getInitParameter("DB_User");
    dbPass = context.getInitParameter("DB_Pass");
}

protected void processRequest(HttpServletRequest request, HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    PrintWriter out = response.getWriter();
    try {
        /* TODO output your page here. You may use following sample code. */
        out.println("<!DOCTYPE html>");
        out.println("<html>");
        out.println("<head>");
        out.println("<title>Servlet JDBCServlet</title>");
        out.println("</head>");
        out.println("<body>");
        out.println("<h1>Servlet JDBCServlet at " + request.getContextPath() + "</h1>");
        out.println("</body>");
        out.println("</html>");

        try {
            Class.forName(dbDriver);
            connection = DriverManager.getConnection(dbURL,dbUser,dbPass);
            out.println("Connected!");
        }
        catch(Exception ex){
            out.println(ex.getMessage());
            out.println("Not connected!");
        }
    } finally {
        out.close();
    }
}
```

Web.xml

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<web-app version="3.0" xmlns="http://java.sun.com/xml/ns/javaee"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://java.sun.com/xml/ns/javaee
http://java.sun.com/xml/ns/javaee/web-app_3_0.xsd">
```

```
<servlet>
```

```
<servlet-name>JDBCServlet</servlet-name>
```

```
<servlet-class>JDBCServlet</servlet-class>

</servlet>

<servlet-mapping>

  <servlet-name>JDBCServlet</servlet-name>

  <url-pattern>/JDBCServlet</url-pattern>

</servlet-mapping>

<context-param>

  <param-name>DB_Driver</param-name>

  <param-value>com.mysql.jdbc.Driver</param-value>

</context-param>

<context-param>

  <param-name>DB_URL</param-name>

  <param-value>jdbc:mysql://localhost:3306/mysql</param-value>

</context-param>

  <param-value/>

</context-param>

</web-app>
```

Output

Lab Guide 5: session tracker

Code

```
HttpSession session = request.getSession();  
  
session.getId()  
  
session.getMaxInactiveInterval()  
  
session.setMaxInactiveInterval(20 * 60);  
  
session.getMaxInactiveInterval()
```

Output
